

Foothill Estates

Proudly Presents Clark County's First Fiber Optic Community!

The Family Oriented Community Where Kids Flourish and Grand Children Thrive!

Now You'll See Things at the Speed of Light!

The Paul Moody Development Company in partnership with TDS Telecom is excited to present Foothill Estates as the first Fiber Optic community in Clark County. We have taken great care in making Foothill Estates an efficient, sustainable, and great place to live. As part of our commitment to building for the future we have incorporated the latest in fiber optic technologies to deliver today's most advanced communication requirements, as well as provide long-term bandwidth capabilities to "future proof" your home for the next generation of technology enhancements.

WHAT CAN OPTICAL FIBER DO FOR YOU?

Foothill Estates Fiber to the Home substantially increases the value of your real estate investment by literally thousands of dollars by providing you, the homeowner, with ultra-high speed internet that has almost unlimited bandwidth for both today's applications and the applications of the future. Because Fiber to the Home offers virtually unlimited bandwidth, or room, for sending and receiving large amounts of content, you can reach beyond the necessities to enhance your personal and professional ways of life:

Foothill Estates community wide fiber optic backbone provides some of the fastest and largest capacity residential broadband service available anywhere. Your home will have more speed, capacity, and dependability than most businesses do and for only a fraction of the cost. This will allow you to immediately begin experiencing the latest in high-bandwidth capabilities;

- Simultaneous connection to multiple home computers
- File sharing, high quality voice over IP, real time video conferencing, HDTV, and video on demand
- Work at home: ultra fast, efficient broadband gives you more than enough bandwidth to telecommute
- Distance learning: Participate in real time online classrooms and seminars
- Rapid, speed of light data delivery
- Online gaming and participation in internet auctions at much higher speeds than cable modems
- Easy music and video download or utilize complex video entertainment systems

Your Fiber to the Home connection also provides the long-term, flexible bandwidth necessary for the next generation of communications technologies; Fiber technology allows you to have a "smart home" with features that were previously reserved for only ultra wealthy:

- Experience interactive audio and video, and seamless file sharing
- Monitor and control your home's HVAC, lighting, lawn sprinklers, other systems, anywhere in the world from the web
- Increase bandwidth capacity and change services whenever you want, eliminating the delay of waiting for third party help
- Visit the doctor from your PC
- Access networked security cameras remotely
- Accommodate for emerging IP-based appliances, shared content between a PC, media server, & A/V receiver

High capacity Fiber to the Home also provides room for future Television delivered using Internet Protocol. IPTV simply offers many entertainment features unavailable with traditional television: High quality, streaming HDTV programming; dynamic movie selection and interactive entertainment. Expect the next generation of IPTV to let you watch live HD video of a basketball game while accessing scores and stats; or, change the camera angle on an instant replay. Surf the web from your TV using a wireless keyboard. Seamlessly enjoy HDTV, VOD, and Blu-ray. Additionally, access photos and music from your PC.

SMART HOME POSSIBILITIES

To further enhance your home's value and livability, Foothill Estates preferred builders offer smart box solutions to let you currently or in the future control your home's environment from any web-enabled device or central touch panel.

Before applying sheet rock to your walls, for a relatively small investment, pre-wire for Smart Home features to save thousands of costly upgrades in the future. Ensure future options and flexibility for incorporating technologies at any point now or in the future. Now you have the ability to adjust the temperature, light the entryway, lower the shades, and select a favorite CD, even before you step through the door. Or, simply see who's at the front door by accessing a security camera on your PC or television. By using our Smart home solutions you can rest assured that you have prepared your new home with the most advanced communication technologies available now and in the future.

Major manufacturers such as Samsung, Microsoft, GE, and Intel are spearheading significant initiatives to bring more Smart Home devices and appliances to your doorstep. Your Fiber to the Home network will allow them to play friendly in your home and your community now and in the future.

Many systems and appliances will be able to be checked and monitored remotely to detect issues before they become problems. Because your community uses optical fiber and not copper based cable or phone lines, your Fiber to the Home community is not susceptible to electrical interference or other transmission obstructions. A signal on a fiber network can be transmitted over 40 miles without amplification. This translates to less downtime and higher reliability.

Foothill Estates preferred builders offer basic smart home packages to all of Foothill Estates owners. Be sure to ask your representative and your preferred builder about all the smart home options available to you.
